

Gaskets

Reliably safe and efficient operation, maximum cost-effectiveness: Sealing solutions from EagleBurgmann.

The right gasket for every application.

Their role as key components makes seals highly important. They protect in-process products against external influences and contamination, and help prevent emissions. In doing so, they boost the plant's process stability, availability and operating efficiency.

With a broad spectrum of high-quality gaskets ranging from fiber and rubber-based, PTFE types to graphite and metal seals plus the relevant accessories, EagleBurgmann can be relied upon to provide the right sealing solution for every application.

Reliable, safe and cost-effective solutions from one single source.

Besides our comprehensive portfolio of products, our know-how in terms of the respective processes, media and standards enables us to come up with top-grade solutions which are not only technically reliable and safe but also cost-effective into the bargain.

Whatever requirements our customers might have, we know the effects of all factors on functionality and cost-effectiveness – and continually put this know-how into practice in the form of sustainable and reliable sealing solutions.

To this end we have the entire spectrum of competencies needed to accompany, support and enhance the sealing solution's entire development, life and service cycle. From engineering, consultancy and configuration right through to custom-tailored on-site services: EagleBurgmann offers all this from one single source.

EagleBurgmann gasket selector

The table lists all the key operating data for EagleBurgmann gasketing products – classified according to their various potential applications.

			Fiber		PTFE						Graphite and mica								Metallic

Important note

All the technical specifications are based on extensive tests and our many years of experience. However, the diversity of possible applications means that they can serve as guide values only.

It should be noted that the extremal values of each operating parameter cannot be applied at the same time because of their interaction. Furthermore, the operating range of each specific product depends on the respective pressure, external forces and influences, temperature and on the medium to be sealed.

A guarantee can only be given in the individual case if the exact conditions of application are known and these are confirmed in a special agreement. When critical conditions of operation are involved, we recommend consulting with our specialist engineers.

Contents

EagleBurgmann has been developing, manufacturing and installing sophisticated sealing systems for over 125 years. Our continuing success is firmly founded on uncompromising orientation to ensuring the very highest degrees of safety, reliability and cost-effectiveness for our customers. Many of our sealing solutions are developed in close cooperation with industrial plant operators – with the clear advantage that optimal account can thus be taken of the specific processes and conditions on site.

Requirements on the environmental compatibility of industrial facilities are growing all the time, with the result that the development of gaskets in particular is gaining increasing importance. This is because they, as industrial bulk products, have to offer the greatest possible safety and durability. EagleBurgmann's products meet these requirements – and we go several steps further in the interests of protecting people and the environment; we give our customers active on-site support towards

selecting the best solution. However, we never stop optimizing our products and services since what is already good can be made even better. After all, our top priority lies in ensuring our customers' absolute satisfaction. This is reflected in, for example, our modular TotalSealCare service concept combining advice, engineering and on-site service with conversion, retrofitting and standardization measures. That eases our customers' workload, especially where maintenance-intensive facilities or staffing bottlenecks during general overhauls are concerned. The result is that operations can be resumed faster – and this in turn substantially improves the cost-effectiveness factor.

This catalog provides an overview of our standard range of products, but we also have a broad spectrum of further variants to meet your particular needs and requirements. Please do not hesitate to contact us – we shall be only too pleased to solve your sealing requirements.

How to find the right gasket quickly and easily:

Open out the flap for a complete overview of all the comparative data needed for selecting sealing solutions as you look through the brochure. If you still fail to find a satisfactory solution quickly enough or are unsure about borderline cases, please contact your local EagleBurgmann sales office for assistance. We shall be glad to assist you.

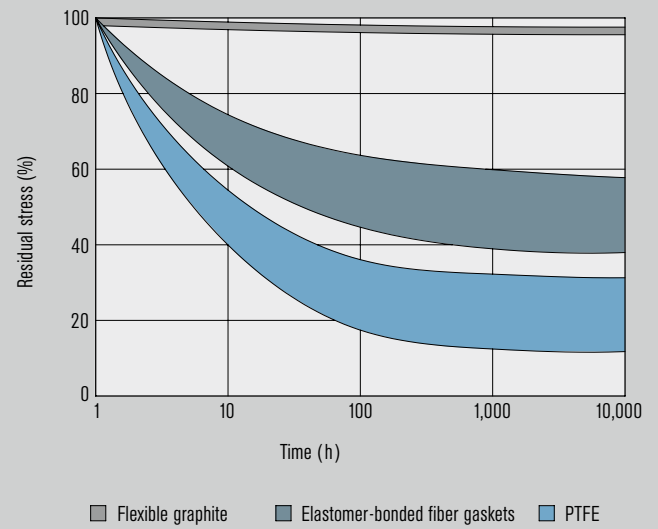

Choice of gaskets

Standard gasket types – Operation range

Gasket duration

The choice of gasket materials and gasket styles can be confusing when you look at all the products which are currently available. To assist you in selecting the best gasket solution for your application, here are some key considerations for your selection.

When choosing a gasket you always have to balance the following requirements:

- Performance
- Safety
- Reliability
- Service life
- Cost

A gasket's performance must be capable of withstanding all of the operating conditions imposed by the application – pressure, temperature, thermal cycling, shock loading, chemical resistance, safety requirements, etc.

Reliability is of paramount importance since the cost of the gasket is relatively small compared to the potential costs of gasket failure. These costs cannot only be direct replacement costs but also consequential costs due to loss of production and personal injury. The quality of the materials used in the manufacturing of the gasket will have a direct impact on its performance and reliability.

For example, expanded graphite of the same nominal purity from different suppliers can have widely different quantities of specific impurities, etc. These will affect the life of the gasket, its rate of volume loss at elevated temperatures and the corrosion effect upon metal components in valves, etc.

Note

For a safe installation use dry and undamaged gaskets. Wet graphite gaskets should be installed after complete drying.

Gasket service life

Gasket cost

Service life expectations will be determined by the application and the equipment and process in which it is installed. Some gaskets will be required to work for the life of the equipment without replacement while other gaskets will be replaced every time that the equipment is maintained.

Cost is always critical, particularly when trying to keep within a strict maintenance and operating budget. Any unexpected and unplanned failure will increase costs dramatically especially when considering potential personnel liability costs and loss of production. Measured against these two extraordinary costs purchasing the cheapest gasket could eventually cost thousands times more than its cost price.

Finally, no gasket will perform correctly if it is installed badly or if the joint system is not monitored and maintained. It is becoming quite common for process plant operators to provide formal training for technicians in the correct installation techniques for bolted joints. EagleBurgmann provides profound seminars and on-site training modules to support our customers.

Many companies are now instituting bolted joint monitoring and maintenance programs to ensure maximum process time and a minimum of unplanned stoppages. EagleBurgmann staff are always available to train technicians to the skill levels required by the relevant international standards and guidelines, e.g. CEN/TS 1591-part 4.

Fiber gasket sheets

Burasil Basic 9544/B

Features

Standard gasket sheet with a balanced mixture of basic materials for flange and flange-like connections in common service pressure and temperature applications.

Advantages

- Good chemical resistance
- Low gas leakage
- Good residual stress

Synthetic sheet made of high-quality aramid fibers, fillers and NBR (Nitrile Butadiene Rubber). Sheet is manufactured with anti-stick coating on one side.

Operating range

Pressure: $p = 80$ bar
 Temperature: $t = -50$ °C ... $+250$ °C (constant), $+350$ °C (transient peak)
 Residual stress: acc. to DIN 52913 (16 hours, 300 °C) 18 N/mm²

Forms of supply

Sheet size: 1,500 x 1,500 mm; 1,000 x 1,500 mm; 3,000 x 1,500 mm
 Thickness: 0.3/0.5/1.0/1.5/2.0/3.0 mm
 Gaskets and rings

Recommended applications

- Process industry
- Pulp and paper industry
- Water and waste water technology
- Mining industry
- Building services industry
- Shipbuilding
- Sugar industry
- Resistant to dilute solutions and a variety of chemicals, fuels, oils, solvents and gaseous media

- Centrifugal pumps
- Covers
- Hatches
- Flange connections
- Pipe connections

Standards and approvals

- DVGW
- HTB
- WRC

Variants

- 9544/BR (cut gasket)

Burasil Universal 9544/U

Features

Universal gasket sheet consisting of high-quality aramid fibers, special fillers and NBR (Nitrile Butadiene Rubber). Suitable for thermally and mechanically highly stressed gasket connections.

Advantages

- Good chemical resistance
- Good tensile strength
- High residual stress
- Very low gas leakage
- Very good oil resistance
- Soft gasket sheet to conform more easily to the flange surface
- PTFE-coated on both sides for easy removal

Operating range

Pressure: $p = 120$ bar
 Temperature: $t = -100$ °C ... $+260$ °C (constant), 380 °C (transient peak)
 Residual stress acc. to DIN 52913 (16 hours/300 °C) 25 N/mm²

Forms of Supply

Sheet size: 1,500 x 1,500 mm; 1,000 x 1,500 mm; 3,000 x 1,500 mm
 Thickness: 0.3/0.5/1.0/1.5/2.0/3.0 mm
 Gaskets and rings

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Power plant technology
- Pulp and paper industry
- Food and beverage industry
- Metal production and processing
- Resistant to the most important groups of media: water/steam, dilute solutions, acids, alkalis, oils/coolants, solvents, gases
- Centrifugal pumps
- Compressors
- Agitators
- Mixers
- Dryers
- Refiners
- Valves
- Heat exchangers
- Hatches
- Reactor vessels

Buratherm N 9544/N

Features

Soft gasket material with the most up-to-date combination of graphite with reinforcement of para-aramid fiber and reduced fillers. Outstanding surface conformity and highly effective anti-stick coating on both sides.

Advantages

- High compression strength
- Long service life
- Easy handling
- No hardening

A superb universal gasket material. Much wider field of applications in comparison to other fiber-based materials with regard to mechanical performance under temperature and also in respect of chemical resistance due to the high content of graphite.

Operating range

Pressure: $p = 150 \text{ bar}$
 Temperature: $t = -100 \text{ °C} \dots +350 \text{ °C}$
 (constant), $+450 \text{ °C}$ (transient peak)

Forms of supply

Sheet size: $1,500 \times 1,500 \text{ mm}$
 Thickness: 0,5/0,8 mm
 Sheet size: $2,000 \times 1,500 \text{ mm}$
 Thickness: 1.0/1.5/2.0/3.0 mm

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Power plant technology
- Metal production and processing
- Oils and greases, acids and alkalis, solvents, coolants, water, steam
- Centrifugal pumps
- Piston pumps
- Compressors
- Fans
- Blowers
- Valves
- Heat exchangers
- Flange connections
- Pipe connections

Standards and approvals

- DVGW
- KTW
- WRC
- W270
- HTB
- BAM (max. $120 \text{ °C}/130 \text{ bar}$)
- TA-Luft

Variants

- 9544/NR (cut gasket)
- 9544/NTH (PTFE envelope gasket)
- 9544/NRG (eyeleted gasket)

Q_{SMAX}

Maximum surface pressure that may be imposed on the gasket at the indicated temperatures without collapse or compressive failure of the gasket.

Q_{MIN(L)}

Minimum gasket surface pressure on assembly required at ambient temperature in order to seat the gasket into the flange facing roughness and close the internal leakage channels so that the tightness class achieved is to the required level **L** for the internal test pressure.

L_N

Tightness classes are defined in terms of specific leakage rates.
 Tightness class: $L_{1.0} \quad L_{0.1} \quad L_{0.01}$
 Specific leakage rate: $\leq 1.0 \leq 0.1 \leq 0.01$
 ($\text{mg s}^{-1} \text{ m}^{-1}$)

Q_{SMIN(L)}

Minimum gasket surface pressure required under the service pressure conditions to maintain the required tightness class for the internal application pressure.

P_{OR}

Factor to simulate the effect of gasket relaxation after bolt tightening with long-term exposure to service temperatures.

PTFE gasket sheets

Burachem Blue 9655/B

Features

Burachem B gasket sheet is a PTFE-based sealing material, filled with hollow micro glass beads. It has high chemical resistance and the greatest flexibility of our PTFE gasket sheets.

Advantages

- Excellent chemical resistance
- Excellent mechanical resistance
- Very low gas leakage (complies with German Fugitive Emission Regulation TA-Luft)
- Minimized cold-flow and creep behavior

Burachem B gasket sheet provides a seal even with low surface pressures and when there are only low bolt forces available. No aging.

Operating range

Pressure: $p = \text{vacuum} \dots 55 \text{ bar}$
 Temperature: $t = -210 \text{ °C} \dots +260 \text{ °C}$
 Chemical resistance: $\text{pH} = 0 \dots 14$

Excellent media resistance throughout the complete pH range including most base chemicals and acids.

Not suitable for fluorine-hydrogens, fluorine compounds or molten alkali metals.

Forms of supply

Sheet size: 1,200 x 1,200 up to 1.0 mm thickness
 Sheet size: 1,500 x 1,500 from 1.5 mm thickness
 Standard thickness: 1.0/1.5/2.0/3.0 mm
 Cut rings, closed or in segments

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Food and beverage industry
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- FDA 21CFR 177.1550
- TA-Luft

Variant

9655/BNR (rings)

Burachem Brown 9655/R

Features

PTFE-based sealing material, filled with silica. Compared to conventional PTFE, this gasket material is suitable for considerably higher pressure and temperature applications.

Advantages

- Excellent chemical resistance
- Excellent mechanical resistance
- Very low gas leakage (complies with German Fugitive Emission Regulation TA-Luft)
- Minimized cold-flow and creep behavior

Ideal gasket sheet for standardization because Burachem R offers best all-round mechanical and chemical properties.

Operating range

Pressure: $p = \text{vacuum} \dots 83 \text{ bar}$
 Temperature: $t = -210 \text{ °C} \dots +260 \text{ °C}$
 Chemical resistance: $\text{pH} = 0 \dots 14$

Resistant throughout the complete pH range as well as against concentrated acids.

Forms of supply

Sheet size: 1,200 x 1,200 up to 1.0 mm thickness
 Sheet size: 1,500 x 1,500 from 1.5 mm thickness
 Standard thickness: 1.0/1.5/2.0/3.0 mm
 Cut rings, complete or in segments

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- FDA 21CFR 177.1550
- TA-Luft
- BAM
- DVGW

Notes

Not suitable for fluorine-hydrogens, fluorine compounds or molten alkali metals (except hydrofluorides).

Variant

9655/RR (rings)

Burachem White 9655/W

Features

PTFE-based gasket material, with barium sulphate filler.
Cold-flow reduced PTFE-based gasket sheet with high mechanical strength and chemical resistance as well as optimized creep resistance.

Advantages

- Excellent chemical resistance
- Excellent mechanical resistance
- Very low gas leakage (complies with German Fugitive Emission Regulation TA-Luft)
- Minimized cold-flow and creep behavior
- High density makes this material ideal for gaskets in steel pipework and equipment where higher bolt loads are required
- No aging

Operating range

Pressure: $p = \text{vacuum} \dots 83 \text{ bar}$
Temperature: $t = -210 \text{ °C} \dots +260 \text{ °C}$
Chemical resistance: $\text{pH} = 0 \dots 14$

Excellent media resistance throughout the complete pH range as well as against most concentrated acids.
Not suitable for fluorine-hydrogens, fluorine compounds or molten alkali metals.

Forms of supply

Sheets 1,200 x 1,200 up to 1.0 mm thickness
Sheets 1,500 x 1,500 from 1.5 mm thickness
Standard thickness:
1.0/1.5/2.0/3.0 mm
Cut rings, complete or in segments

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Agitators
- Mixers
- Dryers
- Filters
- Refiners
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- FDA 21CFR 177.1550
- BAM (O_2) 83 bar/250 °C
- TA-Luft

Variant

9655/WR (rings)

Pressure and temperature operating limits for Burachem with filler (Burachem 9655/B, W and R) as a function of seal thickness

Consolidation and temperature of pure sintered PTFE compared to Burachem with filler (Burachem 9655/B, W and R). Contact pressure: 50 N/mm², seal thickness: 2.0 mm

PTFE gasket sheets

Burachem P 9655

Features

Sheet material made from 100 % virgin PTFE without added reinforcement or fillers. It is suitable for:

- Pipe flanges
- Heat exchangers
- Process equipment
- Pumps and agitator flanges
- Bearing pads

Advantages

- Sheet material with no contamination risk
- Excellent surface conformability and low-friction properties

Operating range

Temperature: $t = -240\text{ °C} \dots +260\text{ °C}$,
transient peak up to $+315\text{ °C}$
Chemical resistance: $\text{pH} = 0 \dots 14$

Pressure range

The pressure range depends on installation and working parameters – please refer to your local EagleBurgmann representative.

Forms of supply

- Sheet size: 1,500 x 1,500 mm in 2 mm and 5 mm thickness
- Sheet size: 1,200 x 1,200 mm in 0.5 mm and 1.5 mm thickness
- Other measurements on request

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Flange connections
- Pipe connections

Standards and approvals

- Physiologically harmless under permanent operating temperature up to $+260\text{ °C}$, acc. to BG Nr. 21
- FDA 21

Variant

9655/PR (cut gaskets)

Burachem Multi 9654/MP

Features

Burachem Multi ePTFE sheet material is made from 100 % virgin PTFE. Because of a special manufacturing technique the resulting material has a multi-directional fibrillized structure (ePTFE), which provides exceptional properties.

Advantages

- PTFE gasket sheet with exceptional adaptability. This material shows almost no increase in width and simultaneously very low compressive creep even under extreme conditions. It has an outstanding residual stress for a PTFE gasket material
- No aging

Operating range

Pressure: $p = \text{vacuum} \dots 200\text{ bar}$
Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$,
short term up to $+315\text{ °C}$
Chemical resistance: $\text{pH} = 0 \dots 14$

Forms of supply

- Sheet size: 1,000 x 1,600 mm
- Thickness: 1.0/1.5/1.6/2.0/3.0/4.0/5.0/6.0 mm

Variant

9654/MR (cut gaskets)

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Power plant technology
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Resistant to all media, except diluted and molten alkali metals as well as elementary fluorine at $t > 150\text{ °C}$ and $p > 40\text{ bar}$
- Centrifugal pumps

- Mixers
- Dryers
- Filters
- Heat exchangers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections

Standards and approvals

- BAM (O_2) $160\text{ °C}/40\text{ bar}$
- TA-Luft
- FDA 21 CFR 177.1550
- Physiologically harmless over long-term-temperature use up to $+260\text{ °C}$, acc. to BG Nr. 21
- In accordance with EN 1514-1 for thickness 2 mm
- Blow-out safety acc. to VDI 2200 class C

Notes

Very easy on-site cutting or size-optimization with hand tools possible.

Burachem Multi 9654/MP – thickness on assembly

PTFE sealants and tapes

PTFE sealant tape 6725/L

Features

Concentrically woven pure PTFE filament yarn.

Advantages

- Excellent surface conformability makes this ideal for vessel and pipe flanges with rough, uneven, or glass-lined surfaces
- Suitable for food industry
- Almost no PTFE cold flow

Operating range

Pressure: $p = 15$ bar
 Temperature: $t = -200$ °C ... $+280$ °C
 Chemical resistance: pH = 0 ... 14

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Water and waste water technology
- Building services industry
- Food and beverage industry
- Sugar industry
- Resistant to strong acids and alkalis, aggressive gases, solvents, foods, pharmaceuticals (not against molten alkali metals)
- Agitators
- Mixers
- Refiners
- Covers
- Hatches
- Process vessels
- Flange connections
- Maintenance seals

Functional description

Endless connection by inserted-tongue fastener.

Forms of supply

Width (mm)	Thickness (mm)	Weight (g/m)
10	3	50
20	4	145
25	5	225
35	6	375
50	7	700

As well as pre-cut by the meter

TR PTFE/graphite sealant tape 6732

Features

PTFE/graphited carbon yarn braided into flat, dry (without additional impregnation), sealant tape.

Advantages

- The high content of high-quality carbon yarns is very flexible and gentle to the sealing surface
- For vessel and pipe flanges with high levels of unevenness and/or enamelled surfaces

Operating range

Pressure: $p = 25$ bar
 Temperature: $t = -200$ °C ... $+280$ °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

Width (mm)	Thickness (mm)
10	3
20	3
25	4
35	5
50	6

Special sizes on request

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pulp and paper industry
- Water and waste water technology
- Sugar industry
- Resistant to strong acids and alkalis, aggressive gases, solvents, (not suitable for liquid alkali metals)
- Covers
- Hatches
- Flange connections
- Maintenance seals

Standards and approvals

BAM approval for oxygen $+40$ °C at 65 bar up to $+200$ °C at 50 bar.

PTFE cord 9660

Features

Cord made from twisted pure PTFE with reduced cold flow due to special production procedure.

Advantages

Suitable for valve spindles and flanges in chemical, pharmaceutical and food industry.

Operating range

Pressure: $p = 105$ bar
 Temperature: $t = -200$ °C ... $+280$ °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

Diameter: 2.5 mm; roll: 15 m
 Diameter: 3.2 mm; roll: 15 m
 Diameter: 4.0 mm; roll: 10 m
 Diameter: 6.0 mm; roll: 15 m
 Diameter: 8.0 mm; roll: 5 m
 Diameter: 10 mm; roll: 5 m

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Water and waste water technology
- Food and beverage industry
- Sugar industry
- Flange connections
- Maintenance seals

Standards and approvals

BAM Tgb.-No. 10570/840 for oxygen of 50 bar at 100 °C or of 30 bar at 200 °C

Notes

Flanges will be sealed quickly and effectively by laying the round PTFE cord (twist ends together) in a ring around the flange surface.

PTFE sealants and tapes

Quick-Seal MB4 9654/MB4

Features

Sealant tape made of 100 % virgin, expanded PTFE manufactured by a special process giving the tape a multi-directional fiber structure with a self-adhesive strip on one side. EagleBurgmann Quick-Seal MB4 is currently the first and only multi-directional ePTFE tape with approval and certification according to TRD 401/VdTÜV-Instruction Seal 100 and is especially adapted to the needs of inspection hole and manhole connections.

Advantages

The manufacturing process enhances characteristics like extremely low compressive creep or increase in width even under extreme conditions. Additionally to its wide thermal and chemical application range, the tape shows outstanding sealability for cold water testing and during normal operating conditions. The tape is ideal for plant standardization.

Operating range

Temperature: $t =$ approved up to 250 °C
 Pressure: $p =$ approved up to 40 bar steam and 88 bar water
 Chemical resistance: $pH = 0 \dots 14$

Forms of supply

- Supply as tape by the meter, with self-adhesive strip for easy installation, on rolls of 10 or 25 m
- Tape size: 15 x 6 mm

Recommended applications

- Power plant technology
- Water and waste water technology
- Building services industry
- Resistant to all media, except diluted and molten alkali metals as well as elementary fluorine at $t > 150$ °C and $p > 40$ bar
- Covers
- Hatches
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- Approved up to 40 bar operating pressure
- TÜV
- TRD 401

Notes

No danger of confusion because one tape could be used for all types of vessels and lids. With the self-adhesive strip on one side, the tape is easy to install. To get a seal, the tape should be cut with an angle at one end. If possible start at bolt hole. Then the tape can be stuck around the flange in the middle of the sealing surface. To close the ends, the tape should again be cut with an angle and overlapped with the start point.

Burachem MMH 9654/MMH

Features

These safety-gasket rings made from multi-directional expanded PTFE are manufactured to meet the requirements of end-users for safety, tightness and reliability. This gasket is especially designed for use as handholes, headholes, manholes and all kind of inspection ports in vessels and boilers. According to Germany's law an approval according to TRD 401/VdTÜV-Instruction Seal 100 is available.

Advantages

This gasket material made from 100 % virgin and expanded PTFE is free from deterioration and physiologically harmless. Universally applicable, these gaskets have high adaptability and operating safety meeting test category D.

Operating range

Pressure: $p =$ approved up to 40 bar operating pressure, cold water test pressure: 88 bar
 Temperature: $t =$ approved up to 240 °C

Forms of supply

Ready to install rings in the following sizes:
 80 x 120 x 15 x 6 mm
 100 x 150 x 15 x 6 mm
 115 x 165 x 15 x 6 mm
 150 x 200 x 15 x 6 mm
 220 x 320 x 25 x 6 mm
 300 x 400 x 25 x 6 mm
 320 x 420 x 25 x 6 mm
 350 x 450 x 25 x 6 mm
 Other measurements on request.

Recommended applications

- Building services industry
- Water and waste water technology
- Power plant technology
- Resistant against all medias at the range $pH 0$ to 14 excepting molten alkali metals, in particular resistant to boiler feed water according to TRD 611
- Reactor vessels
- Process vessels
- Hatches

Standards and approvals

- TÜV
- TRD 401

Notes

The very high adaptability during installation ensures exceptional cold water tightness. The previously needed high installation effort when using a rubber or fiber-based gasket for the cold water pressure test is no longer necessary.

Assembly with sloping cut – Burachem MMH 9654/MMH

Elastic Tankpak 6756

Features

The EagleBurgmann Elastic Tankpak is an excellent gasket for container in use to transport chemicals or solvents. The core is made from an elastic hollow tubular EPDM rubber and is wrapped by the first layer of PTFE foil. Thereby the chemical resistance of the gasket is significantly upgraded. The intermediate layer made from polypropylene yarn is mainly a kind of cushion. With wrapped PTFE foil the main resistance against the medium will be achieved. The entire seal is then overbraided with PTFE yarn.

Advantages

With the Elastic Tankpak EagleBurgmann offers a re-usable gasket for container and other lid gaskets which offers a very good chemical resistance and a high stability at the same time as a good abrasion resistance. This sealing cord offers a high recovery characteristic and is perfectly usable for periodic opening and closing of those lids. In case of using glass fiber as intermediate layer for the cushion the product variant TG is as well usable for higher temperatures.

Operating range

Pressure: $p = 0.7$ bar

Temperature: $t = -50$ °C ... $+100$ °C,
(250 °C for 6756/TH)

Chemical resistance: pH = 0 ... 14

Forms of supply

10 ... 60 mm square/rectangular cross-section lengths (meters) or endless rings to suit application.

Recommended applications

- Chemical industry
- Shipbuilding
- Acids, alkalis, oils, organic solvents, fluent fluent and powderlike chemicals
- Suitable for IMO class 2 and 3 chemical cargos
- Covers
- Hatches

Standards and approvals

- DNV, USCG (PO2/1,2 butylene oxide)
- Germanischer Lloyd

Notes

Cover design and seal installation. The cover should be designed to accommodate a gasket of not too large a cross-section. With rectangular cross-sections the ratio of width x height should be 3:2. The contact pressure exerted by the cover on the gasket should be adequate and as evenly distributed as possible around the circumference. It is advisable to fit several toggles/clamps around the periphery. The contact surface for the gasket on the coaming should be wide enough and sufficiently rounded to avoid damaging the gasket surface.

Variants

6756/TG: EPDM core/Polypropylene/PTFE

6756/TH: Elastomer core/Glass fiber/PTFE

PTFE sealants and tapes

Quick-Seal Universal F 9654/UF

Features

Self-adhesive sealant tape made from 100 % Teflon® PTFE. The production process creates a micro-porous, mono-directional fiber structure (ePTFE), that gives the seal its special properties. Universal 100 % virgin PTFE flange sealant tape which has:

- Expanded microcellular structure
- Very good adaptability
- Easy to install – tape has adhesive backing to fix into position

Advantages

- The sealant tape, self-adhesive on one side, shows the highest adaptability of all PTFE seals. The adhesive strip protected by a masking paper on the rectangular seal face makes fixing the sealing tape to the flange surface very easy and simple
- Extremely easy to handle and applicable almost anywhere for all kinds of flange styles, sizes and construction shapes

Operating range

Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$, transient peak up to $+315\text{ °C}$
 Chemical resistance: $\text{pH} = 0 \dots 14$

Forms of supply

Supplied on rolls, in lengths of 5, 10, 25 and 50 m.

Width (mm)	Height (mm)
3	1.5
5	2
7	2.5
10	3
12	4
14	5
17	6
20	7
28	5
40	5

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Water and waste water technology
- Mining industry
- Building services industry
- Food and beverage industry
- Sugar industry
- Resistant to all media, except diluted and molten alkali metals as well as elementary fluorine at $t > 150\text{ °C}$ and $p > 40\text{ bar}$
- Agitators
- Mixers
- Dryers
- Filters
- Refiners
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Maintenance seals

Standards and approvals

- BAM (O_2) up to 100 bar/90 °C
- DVGW up to 16 bar
- FDA 21

Notes

The pressure resistance depends only on installation and operating conditions. Please check our installation and maintenance instructions. With the self adhesive strip on one side, the tape is easy to install. The sealant tape is not subject to aging. The adhesive life depends on the storage and installation conditions.

Change in thickness at 20 °C

Seal selection and installation dimension recommendation

The correct choice of the seal's dimension depends on factors like width and composition of the sealing surface, on construction of flanges and bolts as well as on the existing operating conditions. Rule of thumb: Seal width should be approx. 1/4 to 1/3 of the sealing surface width.

Quick-Seal Multi 9654/MB

Features

PTFE gasket tape with high adaptability and stability for extreme requirements such as fragile equipment, large diameter steel flanges with considerable unevenness or very rough surfaces. ePTFE material is distinguished by high adaptability and simultaneously low cold flow as well as a high dimensional stability. The high bi-axial strength also provides high residual stress.

Advantages

Sealant tape of 100 % pure, virgin PTFE with self-adhesive strip on the rear face. Because of the special manufacturing technique the result is a multi-directional fibrillized structure (ePTFE), which demonstrates extraordinary properties.

Operating range

Pressure (p): the pressure resistance depends only on installation and operating conditions. Please check our installation and maintenance instructions.

Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$, transient peak up to $+315\text{ °C}$

Chemical resistance: $\text{pH} = 0 \dots 14$

Forms of supply

Width: 10 ... 65 mm

Thickness: 2/3/6/9 mm

Supplied in rolls

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Resistant to all media, except diluted and molten alkali metals as well as elementary fluorine at $t > 150\text{ °C}$ and $p > 40\text{ bar}$
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Maintenance seals

Standards and approvals

- TA-Luft
- FDA 21 CFR 177.1550
- Physiologically harmless over long-term temperature use up to $+260\text{ °C}$, according to BG Nr. 21
- In accordance with EN 1514-1 for thickness 2 mm
- Blow-out safety according to VDI 2200 class C

Notes

Easy installation on-site including cutting to length or adjustment by hand. Severe unevenness can be levelled by layering and/or shimming. No holding time, no cure time required. No aging of the sealing tape. The adhesion depends on storage and installation conditions.

Characteristic values

AD-Guidelines B7:

$$K_D \times K_D = 25 \times b_D$$

$$K_1 = 2.5 \times b_D$$

DIN 28090-1/prEN 13555:

$$\sigma_{vu(TA-Luft)} / Q_{MIN(TA-Luft)} = 30\text{ Mpa}$$

$$\sigma_{vu(40\text{ bar; }001)} / Q_{MIN(0, 01)} = 25\text{ Mpa}$$

$$\sigma_{vu(10\text{ bar; }001)} / Q_{MIN(0, 01)} = 20\text{ Mpa}$$

$$\sigma_{vu(\text{class C})} / Q_{S\text{ MIN}(\text{class C})} = 10\text{ Mpa}$$

$$\sigma_{bv} / Q_{S\text{ MIN}(0, 01)} = 5\text{ Mpa}$$

$$\sigma_{vd} / Q_{CRIT} = 180\text{ Mpa}$$

DIN 28090-2:

$$\epsilon_{KSW} = 39\%$$

PTFE sealants and tapes

Quick-Seal Blue 9655/BBC

Features

Sealant tape of microcellular expanded PTFE, filled with hollow glass microspheres giving great material flexibility.

- Very good flexibility
- High resilience ability
- High chemical resistance
- Good creep and cold flow properties
- Dimensionally stabilized

Advantages

Universal seal for reliable and economic sealing of plastic and fragile equipment flanges.

The self-adhesive tape is very suitable to produce seals in any shape on-site.

Preparation, delivery time and expensive waste in using cut gaskets is avoided.

- Universally applicable
- High tightness
- Reduction of shut down times
- Quick and easy installation
- No scrap
- Reduction of total costs

Operating range

Pressure (p): the pressure resistance depends only on installation and operating conditions.

Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$, transient peak up to $+315\text{ °C}$

Chemical resistance: $\text{pH} = 0 \dots 14$

Recommended operation limits:

$-200\text{ °C} \dots +200\text{ °C}$, with simultaneously permitted over-pressure

Forms of supply

- Supplied by the meter, on rolls with lengths of 10, 25 or 50 m
- $9 \times 3\text{ mm}$
- $14 \times 3\text{ mm}$
- $19 \times 3\text{ mm}$

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Food and beverage industry
- Sugar industry
- Universally resistant, except HF, H₃PO₄, concentrated alkalis, diluted and molten alkali metals as well as elementary fluorines at higher temperatures and pressures
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Maintenance seals

Standards and approvals

- FDA US 21 CFR 177.1550

Notes

With self-adhesive strip on one side, the tape is easy and quick to install.

Quick-Seal Brown 9655/RBC

Features

Sealant tape of microcellular expanded PTFE, filled with quartz, with high residual thickness when installed.

- Very good flexibility
- High resilience ability
- High chemical resistance
- Good creep and cold flow properties
- Dimensionally stabilized

Advantages

Universal seal for reliable and economic sealing of ring-shaped or angled flanges, e.g. pressure vessels or heat exchangers.

The self-adhesive tape sold by the meter is very suitable to produce seals in any shape on-site. Preparations, delivery time and expensive waste (in case of punched gaskets) are not applicable.

- Universally applicable
- High tightness
- Reduction of shutdown times
- Quick and easy installation
- No scrap
- Reduction of total costs

Operating range

Pressure (p): the pressure resistance depends only on installation and operating conditions.

Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$, transient peak up to $+315\text{ °C}$

Chemical resistance: $\text{pH} = 0 \dots 14$

Recommended operation limits:

-200 °C up to $+200\text{ °C}$, with simultaneously permitted over-pressure

Forms of supply

- By the meter, on rolls with lengths of 10, 25 or 50 m
- $9 \times 3\text{ mm}$
- $14 \times 3\text{ mm}$
- $19 \times 3\text{ mm}$

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Universally resistant, except HF, H₃PO₄, concentrated alkalis, diluted and molten alkali metals as well as elementary fluorines at higher temperatures and pressures
- Agitators
- Mixers
- Dryers
- Filters
- Refiners
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- FDA US 21 CFR 177.1550

Notes

With the self-adhesive strip on one side, the tape is easy and quick to install. The closing joint is easily made with a knife.

Figure 1

Minimize installation and maintenance downtime!

The self-adhesive backing makes Quick-Seal CellFlon gasket tape easy to install. Completely clean the sealing surfaces and remove any dirt, corrosion, oil or material from the previous gasket. Cut the first end of the gasket tape using a sloping cut as shown in Fig. 1.

Figure 2

Remove the protective paper and start next to a bolt hole – sticking the tape at the center of the sealing surface. Stick the gasket tape around the flange circumference and close the gasket using a second sloping cut for the ending. (See Fig. 2.) The length of the overlap must be as a minimum equal to the tape width.

Quick-Seal White 9655/WBC

Features

Sealant tape of microcellular expanded PTFE, without fillers for highest chemical resistance.

- Good flexibility
- High resilience ability
- High chemical resistance
- Good creep and cold flow properties
- Dimensionally stabilized

Advantages

Universal seal for reliable and economic sealing of plastic flanges and equipment flanges.

The self-adhesive tape is very suitable to produce seals in any shape on-site. Preparation, delivery time and expensive waste in using cut gaskets are not applicable.

- Universally applicable
- High tightness
- Reduction of shutdown times
- Quick and easy installation
- No scrap
- Reduction of total costs

Operating range

Pressure (p): the pressure resistance depends only on installation and operating conditions.

Temperature: $t = -240\text{ °C} \dots +270\text{ °C}$, transient peak up to $+315\text{ °C}$

Chemical resistance: $\text{pH} = 0 \dots 14$

Recommended operation limits: $-200\text{ °C} \dots +200\text{ °C}$, with simultaneously permissible over-pressure

Forms of supply

- Supplied by the meter, on rolls with lengths of 10, 15 or 50 m
- 9 x 3 mm
- 14 x 3 mm
- 19 x 3 mm

Recommended applications

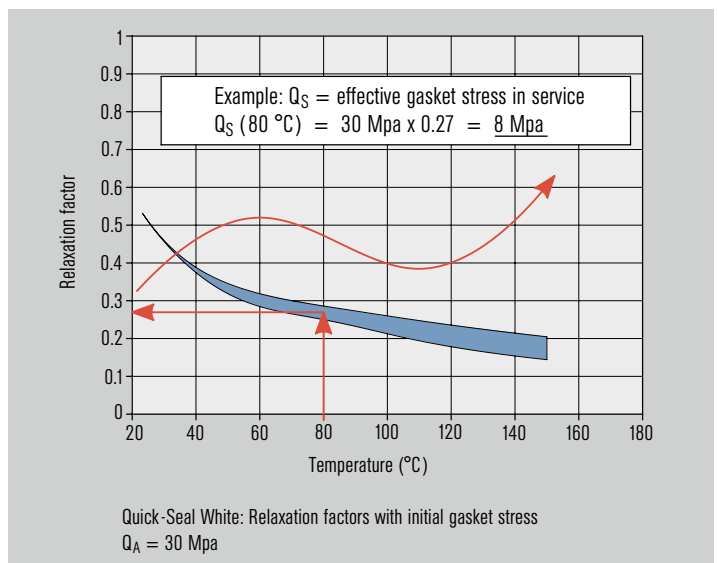

- Process industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Pulp and paper industry
- Food and beverage industry
- Sugar industry
- Universally resistant, except HF, H₃PO₄, concentrated alkalis, diluted and molten alkali metals as well as elementary fluorines at higher temperatures and pressures
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Standards and approvals

- FDA US 21 CFR 177.1550

Notes

With the self-adhesive strip on one side, the tape is easy and quick to install.

Quick-Seal CellFlon gasket tape is the optimum way to reduce maintenance downtime and reduce both gasket and installation costs. It is the ideal way to manufacture large diameter gaskets or complex shapes directly in-situ. Using Quick-Seal CellFlon gasket tape does not require customized expensive cut or segmented gaskets.

Graphite gasket sheets

All Statotherm products are manufactured from expanded natural graphite which has been carefully selected and produced specifically for sealing applications. The raw graphite is first processed to introduce chemical salts into its molecular structure. These salts are then re-converted into pure graphite using a thermo-shock treatment. The result is the formation of "worms" of graphite loosely held together. Consequently, the graphite is now up to 38 times larger volumetrically allowing it to be subsequently pressed or molded more easily. These molded shapes are permanently elastic and can be formed without the use of binders. Statotherm and Spiraltherm sealing products produced from this material have proven to be long-lived and reliable under extreme conditions of pressure and temperature throughout industry for many years.

Advantages and properties of EagleBurgmann Statotherm graphite

- Practically no maintenance required
- Permanently elastic, especially in hot/cold thermal cycling
- No hardening or aging due to absence of binders
- Very good conformance to surface irregularities and unevenness through high level of adaptability
- Permanent resilience, approximately 10 % of pre-stressed seal thickness
- Fire safe tested, up to +900 °C (transient peak)
- Tested at low temperatures down to -196 °C
- Good thermal conductivity
- Good handling – easy to cut or punch
- High pressure resistance – depending upon seal design – up to 1,000 bars
- High temperature resistance: -200 °C up to 550 °C (+3,000 °C in a reducing or inert environment)
- High chemical resistance: pH 0 to 14

The performance and service life of a graphite seal is influenced by many factors such as seal design, operating cycle, installation procedures, etc. However, the most critical factors are the effects of graphite impurities leading to metal component corrosion and exposure to oxygen which accelerates volume loss of the sealing element.

Statotherm products are manufactured using only high-quality graphite which has strictly controlled quality requirements. Where necessary, corrosion inhibitors are added to enhance service life and protect equipment. For more details and to select the most suitable grade for your applications, please contact your local EagleBurgmann representative.

Mass loss of different quality graphites

Expanded graphite: impact of ash content upon leakage performance

Statotherm P foil 9591/P

Features

Gasket sheet material of flexible graphite, purity >99.85 % and low ash content. The soft and flexible material can compensate for uneven surfaces.

Advantages

- Statotherm foil is the basic gasket material without measurable cold or warm flow and therefore applicable for all branches of industry as the gasket material for valves and pumps, for emergency service and special applications
- Statotherm has a good resistance to chemicals, an excellent performance with temperature cycling and a high stability under pressure

Operating range

Pressure: $p = 60$ bar
 Temperature: $t = -200$ °C ... +500 °C,
 steam: +550 °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

- Sheet size: 1,000 x 1,000 mm
- Thickness: 0.5/1.0/1.5/2.0 mm
- According to drawing, measurements or other agreements

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Water and waste water technology
- Building services industry
- Shipbuilding
- Metal production and processing
- Centrifugal pumps
- Piston pumps
- Compressors
- Blowers
- Valves
- Heat exchangers
- Covers
- Flange connections
- Maintenance seals

Standards and approvals

- DVGW
- BAM (O₂)

Notes

For installation only use dry and undamaged gaskets. Wet graphite gaskets should be installed after complete drying.

Variant

9591/R (rings, gaskets)

Statotherm SSTC-TAL 9592/P

Features

High-quality gasket sheet made of expanded graphite and a layer of expanded metal. It covers the whole spectrum of classic gasket materials. This material is universally applicable in all areas of industry and maintenance engineering. The sealing material – expanded graphite >99 % (graduated density) with an acid-resistant expanded metal inlay of chromium-nickel-steel (1.4404) – forms a three-dimensional structure when under load. Without any binder or filler, silicon-free.

Advantages

- Good solution for applications, where aggressive media, high temperatures and high pressures occur simultaneously. Additionally, appropriate for low surface pressure or narrow web width
- Generally suitable for all applications under extreme conditions, even under cycling loads
- Especially designed to meet the TA-Luft requirements (IPPC-directive). Suitable, e.g. in petrochemical and chemical industry or plant engineering, as well as for flanges in old equipment due to the excellent adaptability and flexibility. Very good for standardization
- Conforms to requirements of TA-Luft (VDI-Guideline 2440) of 10-4 mbar x l/s x m leakage at 30 Mpa

Operating range

Pressure: p = 200 bar
 Temperature: t = -240 °C ...+550 °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

- Sheet size: 1,000 x 1,000 mm; 1,500 x 1,500 mm
- Thickness: 1.0/1.6/2.0/3.0 mm
- As well as rings with and without inner eyelet

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Power plant technology
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Heat exchangers
- Covers
- Reactor vessels
- Process vessels
- Flange connections
- Maintenance seals

Standards and approvals

- TA-Luft
- Fire safe (API 607/BS6755)
- BAM (O₂: 200 °C/130 bar)
- DVGW
- 300 °C: 140 Mpa
- Blow-out safety according to VDI 2200 class C

Notes

- DIN 28091-4: GR-10-I-1M-Cr
- No aging

Variants

- 9592/R (rings)
- 9592/G (rings with eyelet)

Statotherm SSTC 9592/MP

Features

Reinforced gasket sheet made of impregnated graphite >98 % with adhesive-free inlay of expanded metal (1.4404).

Advantages

Graphite gasket sheet with special reinforcement of expanded metal. Seals made from this graphite sheet material show outstanding performance due to the expanded metal inlay contributing significantly to the sealing effect. It is superior to all other graphite sheets and therefore is excellent choice for plant standardization.

Operating range

Pressure: p = 200 bar
 Temperature: t = -240 °C ... +500 °C
 Temperature limit for steam: +550 °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

- Sheets 1,000 x 1,000 mm
- Thickness: 1.0/1.5/2.0/3.0 mm
- According to drawing, measurements or other agreements

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Pharmaceutical industry
- Power plant technology
- Pulp and paper industry
- Water and waste water technology
- Mining industry
- Building services industry
- Food and beverage industry
- Shipbuilding
- Sugar industry
- Metal production and processing
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Heat exchangers
- Covers
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Exhaust ducting
- Furnaces

Standards and approvals

- DVGW
- KTW
- Fire safe (API 607/BS6755)
- BAM (O₂: 200 °C/130 bar)

Variant

(Former article number 9593/MP)
 9592/MR (rings, gaskets)

Graphite gasket sheets

Statotherm 1P 9593/1P

Features

Graphite-based gasket sheet made from flexible graphite (>98 %) bonded to smooth stainless steel foil (316 L; 0.05 mm thickness).

Advantages

Statotherm 1P is a gasket sheet material with a highly adaptive graphite layer allowing its use at low surface pressures or with weak flanges. This graphite gasket sheet stands out because of:

- No aging, no altering of structure
- Long-term stability of compression and recovery
- Exceptional oxidation resistance

Operating range

Pressure: $p = 40$ bar
 Temperature: $t = -200$ °C ... $+400$ °C at inert ambience or steam: up to $+500$ °C
 Chemical resistance: $pH = 0$... 14

ASME "m" and "y" factors

Product	m	y (Mpa)	y (PSI)
Statotherm 9591/P	2.00	10.30	1,500
Statotherm 9593/1P	2.00	10.30	1,500
Statotherm HDP 9593/HDP	2.50	20.70	3,000
Statotherm S6P 9593/S6P	2.50	13.80	2,000

Forms of supply

- Sheet size: 1,000 x 1,000 mm
- Thickness: 0.55/0.75/1.0/1.5/2.0/3.0 mm
- According to drawing, measurements or other agreements

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Centrifugal pumps
- Piston pumps
- Compressors
- Valves
- Heat exchangers
- Covers
- Flange connections
- Maintenance seals

Standards and approvals

- DVGW
- BAM approval 200 °C/130 bar

Notes

For a safe installation use dry and undamaged gaskets. Wet graphite gaskets should be installed after complete drying.

Variants

- 9593/1R (rings, gaskets)
- 9593/1S (segments)

Statotherm HDP 9593/HDP

Features

Reinforced, multi-layer gasket sheet made of 0.5 mm thick layers of high-grade, impregnated graphite foils (purity >99.85 %) manufactured without adhesive with 0.05 mm thick stainless steel foils (AISI 316 L).

Original Sigraflex® HD, 9593/HIG: with inner eyelet made of stainless steel (1.4571), thickness: 0.15 mm.

Advantages

Statotherm HDP is the perfect solution for applications with high flange pressures and high operating pressures. The gasket is used for applications with a high demand for operating safety and leak tightness; also in power plants as asbestos-free alternative for vessel seals.

- Good performance under temperature cycling, no aging, doesn't become brittle, because free of glue
- Very good handling
- High mechanical stability
- Stable long-term performance with respect to compression and resilience properties over a wide temperature range

Operating range

Pressure: $p = 250$ bar
 Temperature: $t = -200$ °C ... $+450$ °C, steam: $+550$ °C
 Chemical resistance: $pH = 0$... 14

Forms of supply

- Sheet size: 1,000 x 1,000 mm; 1,500 x 1,500 mm
- Thickness: 1.0/1.5/2.0/3.0/4.0 mm
- According to drawing, measurements or other agreements

Recommended applications

- Building services industry
- Power plant technology
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Compressors
- Flange connections
- Pipe connections
- Valves

Standards and approvals

- DVGW
- BAM approval (130 bar/100 °C)
- TA-Luft (>55 Mpa)
- TÜV
- Germanischer Lloyd
- Fire safe acc. to API 607/BS6755

Notes

For a safe installation use dry and undamaged gaskets. Wet graphite gaskets should be installed after complete drying.

Variants

- 9593/HDR (rings, gaskets)
- 9593/HDM (manhole gasket acc. to German TRD 401)
- 9593/HIG (with inner eyelet)
- 9593/HDP (impregnated for low leakage application acc. TA-Luft)

Statotherm S6P 9593/S6P

Features

Gasket sheet made of flexible graphite, with stainless steel tanged metal reinforcement (316 L, 0.1 mm thickness), purity >98,0 %.

Advantages

Graphite sheet with tanged metal reinforcement. Applicable for steam, gases, oils, aggressive media in all branches of industry. Used in pipe flanges, handholes, pump flanges, valves, ball valves etc.

Operating range

Pressure: $p = 100$ bar
 Temperature: $t = -200$ °C ... $+500$ °C
 steam: $+550$ °C
 Chemical resistance: $pH = 0$... 14

Forms of supply

- Sheet size: 1,500 x 1,500 mm
- Thickness: 1.0/1.5/2.0/3.0 mm
- According to drawing, measurements or other agreements.

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Pulp and paper industry
- Mining industry
- Building services industry
- Sugar industry
- Metal production and processing
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Centrifugal pumps
- Covers
- Hatches
- Flange connections
- Pipe connections
- Ovens
- Maintenance seals

Standards and approvals

- DVGW

Variants

- 9593/S6R (rings)
- 9593/S6G (with eyelet)

Surface pressure diagram as a function of seal thickness (s) to width (b_0)

Sealing characteristics

Under maximum surface pressure of Q_{MAX} , Statotherm is compressed to approximately half of its initial thickness s and attains its highest cross-sectional density. For gaskets with inserts, the compression refers to the thickness of the graphite layer.

Graphite seals and tapes

Statotherm R profile rings R901/B...

Features

Profile rings made from permanently elastic, expanded graphite (>99.85 % graphite) without binders or fillers. Statotherm profile rings provide good deformability, permanent resilience, long-term flexibility and good structural strength.

Advantages

Statotherm R profile rings provide:

- Good deformability
- Permanent resilience
- Long-term flexibility
- Good structural strength

Profile rings, that are almost maintenance-free, for severe temperature changes and/or extreme temperatures, which cannot be handled by elastomeric O-rings.

Operating range

Pressure: $p = 500$ bar
 Sliding velocity (pump applications):
 $vg = 2$ m/s
 Temperature: $t = -200$ °C ... $+500$ °C,
 steam: $+550$ °C
 Chemical resistance: pH = 0 ... 14 Ash
 (<0.15 %)
 Content: chloride content = <20 ppm;
 Density (raw material): 0.7 or 1.0 g/cm³

Forms of supply

- All sizes (min. diameter 3 mm) and profiles up to max. diameter \varnothing 1,000 mm
- Die-pressed rings, closed or in segments

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Centrifugal pumps
- Piston pumps
- Compressors
- Valves
- Flange connections

Notes

The deformation of Statotherm profile rings is permitted in axial direction only. The construction of the groove must be designed to avoid any radial deformation of the sealing ring as this may destroy it.

Variants

R901/B5: density 1.3 g/cm³
 R901/B6: density 1.4 g/cm³
 R901/B7: density 1.6 g/cm³
 R901/B8: density 1.8 g/cm³

Pressure selection and surface pressure for non-load bearing configurations

Pressure (bar)	<160	<250	<400
Required deformation (%)	15	15	15
Required surface pressure (Mpa)	25	55	70
Density (g/cm ³)	1.4	1.5	1.6

Sealing and pre-stressing are usually effected through application of the working pressure. A minimum working pressure is required, however.

Recommended profile dimensions (max. outside diameter x cross-section)

Recommended groove tolerances

Recommended ring tolerances

Tolerances for d_i and d_o are coordinated with the groove tolerances. Necessary for the groove surface finish: $R_z = 10 \dots 40 \mu\text{m}$ (= ISO 1302)

Standard profiles

Special profiles (examples)

Deformability and spring-back

Statotherm V cover seal V881-...

Features

Statotherm V cover seals are made from pure graphite (99.8 %) with internal stainless steel inserts for seal spaces with larger gaps and/or higher pressures, e.g. for power plants at high temperatures and up to approximately 1,000 mm diameter.

Advantages

- Statotherm cover seals are applied as self-sealing gaskets in high-pressure valves
- They do not harden, have a long service life and can easily be installed and removed without damaging the seal surfaces, as can happen with metallic seals
- The internal metal reinforcement allows the seal to bridge larger gaps, minimizing extrusion and ensuring operating safety

Operating range

Pressure: $p = 800$ bar
 Sliding velocity: $vg = 2$ m/s
 Temperature: $t = -200$ °C ... $+500$ °C, in reducing or inert atmosphere:
 $+3,000$ °C
 Chemical resistance: $pH = 0$... 14

V881-B6: density 1.4 g/cm³
 V881-B7: density 1.6 g/cm³
 V881-B8: density 1.8 g/cm³

Forms of supply

- Die-pressed rings, according to drawing, measurements or other agreements
- In different densities and profiles

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Resistant to almost all organic and inorganic acids, alkalis, oils and solvents
- Valves

Variants (profiles see right)

V881-R7 (rectangular)
 V881-A7 (outer chamfer)
 V881-I7 (inner chamfer)
 V881-R7K (rectangular with one cap)
 V881-A7K (outer chamfer with one cap)
 V881-I7K (inner chamfer with one cap)
 V881-K7 (cap for oxidation protection, $t \leq 650$ °C)

Statotherm V cover seal V901/...

Features

Statotherm V901 rings are high-precision seals, which give a very good sealing result with excellent service life combined with very little wear. They are made from permanently elastic, expanded graphite (>99 % graphite, nuclear grade) without binders or fillers.

Advantages

- Statotherm V901 cover seals are used as self-sealing gaskets in high-pressure valves, e.g. for power plants at high temperatures and up to approx. 1,000 mm diameter
- They do not harden, have a long service life and can easily be installed and removed without damaging the seal surface, as can happen with metallic seals

Operating range

Pressure: $p = 500$ bar
 Sliding velocity: $vg = 2$ m/s
 Temperature: $t = -200$ °C ... $+500$ °C
 Temperature limit for steam: $+550$ °C
 Chemical resistance: $pH = 0$... 14

O901/B5: density 1.3 g/cm³
 O901/B6: density 1.4 g/cm³
 O901/B7: density 1.6 g/cm³
 O901/B8: density 1.8 g/cm³

Forms of supply

- Die-pressed rings, acc. to drawing, measurements or other agreements
- Profile I = ring with inner bevel, profile A = ring with outer bevel, profile R = rectangular diameter
- "N" at the end of Art. No. stands for "Nuclear quality", e.g. V901/7N

Variants (profiles see right)

Rectangular profile (without, with one or two end caps):
 V901/R7, V901R7K, V901RKK, V901RWK
 Outer chamfer (without, with one or with two caps):
 V901/A7, V901A7K, V901AKK
 Inner chamfer (without, with one or with two caps):
 V901/I7, V901I7K, V901I

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Valves

Sealing characteristics (N/mm²)

Sealing and pre-stressing are usually effected through application of the working pressure. A minimum working pressure is required, however.

V901/R7 : $\sigma_{vu} = 10$
 V901/I7 : $\sigma_{vu} = 8$
 V881/R7 : $\sigma_{vu} = 12$
 V881/I7 : $\sigma_{vu} = 10$
 σ_{vu} = dependent on gap size $m = 1.4$

Dimensions and tolerances

Profile I with inner bevel – tolerances for valve connection parts: $d_1 = h_9$, $d_2 = h_{11}$

Design and ordering instructions

Design of the cover gasket is conditional on the pressure and dimensions. For enquiries or orders, please state operating conditions and profile form (for example: pressure in bar, diameters d_1 and d_2 ; profile form I, A, R).

Profile R – rectangular

Cover type with fixed metal stop. Recommended for sealing pressure $P_D > 150$ N/mm².

V881 profiles

V901...V911 profiles

Graphite maintenance seals

Manhole gasket – HP 6365/HP

Features

Classic seal made of rubber with woven mesh. This material is especially designed to meet the high requirements of TRD 401 material test class D, temperature-, corrosion- and chemical-resistant high-duty mesh with elastomer coating.

Advantages

The classic mesh-rubber seal is based on a new mesh design with high density and excellent media resistance EagleBurgmann Manhole gasket HP:

- Has a very safety-oriented design of seal surface
- Adapts to optimum seal profile with existing cover lids, independent of existing sealing system
- Easy installation and removal

Operating range

Pressure: $p = 40$ bar
 Temperature: $t = +250$ °C
 Surface pressure: min. 5 N/mm²,
 max. 35 N/mm²
 Recommended warm-up gradient:
 max. 2 °C/min.

Forms of supply

Standard dimensions:
 80 x 120 x 15 x 8 mm
 100 x 150 x 15 x 8 mm
 115 x 165 x 15 x 8 mm
 150 x 200 x 15 x 8 mm
 220 x 320 x 25 x 10 mm
 300 x 400 x 25 x 10 mm
 320 x 420 x 25 x 10 mm
 350 x 420 x 25 x 10 mm
 (other dimensions on request)

Recommended applications

- Power plant technology
- Building services industry
- Boiler feed water/media resistance acc. to TRD 611
- Covers
- Hatches

Standards and approvals

TRD material test class D

Notes

The seal should be re-tightened after restarting the boiler and will reach a safe operating condition after finishing this action.

Statotherm V-Flex 6850/V

Features

Cover seal packing braided with a rectangular profile. Made of permanently elastic pure graphite foils (96 % graphite) with Inconel® wire reinforcement to increase pressure resistance. Doesn't contain binders.

Advantages

- Cover seal by the meter
- For general on-site maintenance use as self-sealing cover seal in high-pressure valves, e.g. for power plants at high temperatures and independent of diameter
- Very flexible, non-hardening, long service life, easy installation without risk of damaging the sealing surfaces as can happen with metallic seals

Operating range

Pressure: $p = 500$ bar
 Temperature: $t = -200$ °C ... $+500$ °C
 Temperature limit for steam: $+550$ °C
 Chemical resistance: $\text{pH} = 0$... 14
 Chloride content: ≤ 100 ppm
 Average density: 1.4 g/cm³

Forms of supply

Supplied by the meter, on rolls
 5 x 12 mm
 7.5 x 15 mm
 10 x 15 mm
 15 x 30 mm
 20 x 30 mm
 25 x 35 mm
 27.5 x 50 mm
 30 x 45 mm

Recommended applications

- Oil and gas industry
- Petrochemical industry
- Power plant technology
- Building services industry
- Covers
- Hatches
- Valves
- Maintenance seals

Notes

Not suitable for strong oxidizing media. Preferably to seal in places, where inner bevel, outer bevel or rectangular profiles are needed. This seal will adapt to any of those.

Statotherm V-Flex 6850/V:

Surface pressure in dependence on gap width during operation

- σ_{vu} = 20 N/mm²
- σ_{vo} = depends on the gap size (refer to graph)
- m = 1.4
- σ_{vu} = min. installed surface pressure in N/mm²
- σ_{vo} = max. installed surface pressure in N/mm²
- m = seal factor for test and operating modes

Mica gasket sheets

Statotherm tape 6750

Features

Statotherm Gasket tape is a braided graphite tape with reinforced Inconel® wire and adhesive backing. Made from pure graphite fibers, the tape has good chemical resistance and temperature stability.

Advantages

- Statotherm Gasket tape can be used as a nearly endless sealing tape to seal all flange forms and styles
- The combination of selected graphite material and the production process results in a non-aging, easy-to-handle sealing tape which shows a high recovery ratio

Operating range

Pressure: $p = 250$ bar (if constrained)
 25 bar (6750/INC) on flat-face or R/F flanges
 16 bar (6750) on flat-face or R/F flanges
 Temperature: $t = -200$ °C ... $+550$ °C
 Chemical resistance: pH = 0 ... 14

Forms of supply

2 kg/roll

Standard dimensions:
 12.7 x 3.2 mm
 25.4 x 6.4 mm
 31.8 x 6.4 mm
 38 x 6.4 mm

Recommended applications

- Process industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Water and waste water technology
- Mining industry
- Building services industry
- Shipbuilding
- Metal production and processing
- Flange connections
- Pipe connections
- Exhaust ducting
- Ovens
- Furnaces

Notes

The tape could be used in flat-face or raised-face flange connections at pressures up to 25 bar. For high-pressure applications the tape should be installed in a retaining groove. The packing can be stored in its original packaging for a minimum of 3 years in dry, cool conditions. The maximum stated operating temperature and pressure cannot be used simultaneously.

Variant

6750/INC (braided graphite tape with reinforced Inconel® wire and adhesive backing)

Statotherm HT 9560

Features

Statotherm HT has the excellent characteristic of growing (in thickness) at the same rate as the flange material expansion rate, i.e. the sealing material follows the deformation of the flange while retaining the necessary tightness with exceptional stability.

Advantages

The properties of Statotherm HT make it ideal for sealing burner flanges in combustion systems, high-temperature heat exchangers, gas turbine housings, flange joints of turbochargers and other exhaust gas superchargers, industrial ceramic components, aerospace, motor vehicle engines – for fitting between the cylinder head and manifold and in the downstream flange joints of controlled catalytic convection systems.

Operating range

Pressure: $p = 5$ bar
 Temperature: $t = +950$ °C in oxidizing atmosphere, $>1,100$ °C in non-oxidizing conditions

Materials

Sealing material: mica compound
 Reinforcement: tanged sheet 1.4828 or 1.4401
 Eyeletting: 1.4828

Forms of supply

Sheet size: 1,000 x 1,016 mm in 0.4 mm thickness
 Sheet size: 1,500 x 1,000 mm in 0.7 mm and 1 mm thickness

Recommended applications

- Aerospace industry
- Power plant technology
- Metal production and processing
- Gaseous media, including those containing solids
- Blowers
- Flange connections
- Exhaust ducting
- Ovens
- Furnaces
- Pressure: $p = 5$ bar
- Temperature: $t = +950$ °C in oxidizing atmosphere, $>1,100$ °C in non-oxidizing conditions

Variants

9560/2 with tanged metal reinforcement (1.4828)
 9560/2G with tanged metal reinforcement and eyeletting (1.4828/1.4828)
 9560/3 with tanged metal reinforcement (1.4401)

Standard design with punched sheet reinforcement and high-temperature resistant steel eyeletting

Prior to initial start-up

After flange warping due to heat

Variants

Product No.	Description	Reinforcement / eyeletting	Seal thickness (mm)
9560/P	Statotherm HT sheet, un-reinforced		0.4 (Sheet size: 1,000 x 1,016 mm)/0.7 and 1.0 (Sheet size: 1,500 x 1,000 mm)
9560/2	Statotherm HT (cut gasket only), tanged metal reinforcement	1.4828	1.3/1.7
9560/3	Statotherm HT sheet, tanged metal reinforcement	1.4401	1.3/1.7/2.0 (Sheet size: 1,200 x 1,000 mm)

Other reinforcement materials available on request

Spiral wound gaskets

Spiraltherm graphite S 9584

Features

Spiraltherm gaskets are manufactured in several combinations of materials with a wide range of dimensions and geometry. They are widely used in refineries, the chemical and petrochemical industry as well as in the power generation industry.

Advantages

- Spiraltherm spiral wound gaskets have exceptionally high operating reliability for high-pressure applications including load bearing and non-load bearing installations
- Seal under severe operating conditions
- Excellent load distribution, stable and reliable sealing performance even under frequent pressure cycles
- Solid construction provides stability and sealability even under severe conditions
- Great resilience (approx. 10 % of uncompressed height)
- Easy installation

Operating range

Pressure: $p = \dots 400$ bar (class 2,500 lbs) for flanges according to EN or ASME standard
 Temperature: $t = -200$ °C ... $+550$ °C (higher temperature possible in an inert atmosphere)
 Chemical resistance: pH = 0 ... 14

Materials

Metal winding
 Stainless steels – most common are: AISI 316L, 316, 304, 304L, 321 (1.4541), 316 Ti (1.4571), 347, ...
 Special alloy windings are also available, e.g. Monel®, Incoloy®, Hastelloy®, Titanium, ...
 Filler materials
 In order to prevent oxidation at elevated temperatures, a high-quality graphite with oxidation inhibitor can be offered.

Standards and approvals

TA-Luft for 9584/GIA
 Germanischer Lloyd 44510 HH
 BAM certification

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Pharmaceutical industry
- Power plant technology
- Pulp and paper industry
- Water and waste water technology
- Mining industry

- Building services industry
- Food and beverage industry
- Shipbuilding
- Sugar industry
- Metal production and processing
- Centrifugal pumps
- Piston pumps
- Compressors
- Valves
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections
- Maintenance seals

Notes

Spiraltherm gaskets filled with graphite are fire safe.

Spiral wound gasket profile with outer and inner ring, windings and filler

Spiral wound gaskets can be manufactured in special designs:

- Stadium
- Oval
- Three-center curve

Product variants

Spiraltherm .../GA
Spiral wound gasket with outer guide ring. Standard type for raised-face flange connections.

Spiraltherm .../GIA
Spiral wound gasket with inner and outer guide ring. This style offers the best performance for raised-face flange connections. The inner ring is used to provide:

- Avoidance of over-compression at elevated seating loads in high-pressure service
- Reduced turbulence within the flange area and protection against corrosion or erosion
- Improvement of the load distribution over the gasket

Spiraltherm .../NF
Spiral wound gasket without guide or inner ring. This style of gasket is used in load-bearing flange configurations, such as tongue and groove flanges. Standard dimensions according to EN/ASME.

Spiraltherm .../VR
Spiral wound gasket without inner ring or outer guide ring. Mainly used for male and female flanges or projection and recess flanges.

Spiraltherm .../VRI
Spiral wound gasket with inner ring. Mainly used for male and female flanges or projection and recess flanges. An inner ring is necessary as a compression stop.

Spiral wound gaskets

Spiraltherm spiral wound gasket 9584.

Design of connections for tongue and groove flanges

Design of connections with load bearing gaskets

For Spiraltherm .../NF or /VR, /VRI, /GIA, /GA.

Standard dimensions of gaskets for use in load-bearing configurations are given in the tables shown on page 44 – 46. For designs which deviate from standard the following dimensions are recommended (sizes in mm).

Load bearing gaskets

DN	d_2	d_3	S
≤600	$d_{NI}^{+0.5}$	$d_{NA}^{-0.5}$	$3.5^{+0.2 / +0.8}$
≤1,000	$d_{NI}^{+1.0}$	$d_{NA}^{-1.0}$	$4.5^{+0.2 / +0.8}$

DIN 2505 Part 2	σ_{HI} 65	σ_{HO} 300	m 1.4
AD-Guidelines B7	$k_0 \times k_D$ 65 x b_d		k_1 $1.4 \times b_d$
ASME Code	m 2.5	y (PSI) 10,000	y (Mpa) 70

Design of connections with non-load bearing gaskets

For Spiraltherm .../NF gaskets in a non-load bearing arrangement no further compression of the gasket is possible when the flanges are in contact. Extremely accurate sizing of the groove and gasket is therefore necessary. Since no standards exist as yet for the use of spiral wound gaskets in non-load bearing applications, we suggest applying the recommendations in the adjacent table. To achieve an optimum sealing action, the ratio of gasket volume to groove volume must be favorable. This is achieved by applying the formula:

$$\frac{b_D}{b_N} \approx 0.86$$

When $b_D < 6.5 = 0.85$

We can supply you with calculations (seal dimensions, bolt force, etc.) and compression test data if required.

Manufacturing tolerances for fillers and windings (mm)

Tolerances	ASME B16.20*	EN 1514*	EagleBurgmann internal standard
s (tolerance including the filler)	+0.07 +0.063	+0.4 +1.1	+0.2 +0.8

<1,000	≤7		4.5	d ₃ + 1.0		d _{NA} - 2 _{DN}	3.3 ^{+0.1}
<1,000	≤7	d ₃ - b _D	6.5	d ₃ + 1.0		d _{NA} - 2 _{DN}	4.7 ^{+0.1}

$\sigma_{vu} = 65$ $\sigma_{v0} = 500$ $m = 1.4$ $Rz = 12.5 \dots 30 \mu m$

Spring characteristic and helium tightness of Spiraltherm (47 x 55 x 3.7 mm) in a non-load bearing configuration. Diagram shows Helium leakage rate and gasket spring-back in flange contact condition (75 N/mm²) during subsequent load relief.

Installation Note:

If the flange has no projection or retaining recess for the gasket, it will need an outer back-up and centering ring. A very exact design calculation and measurement of seal as well as of groove is necessary. This is because for Spiraltherm in non-load bearing connections, no further compression of the gasket is possible when the flanges are in contact.

Corrugated gaskets

Corratherm corrugated gasket 2897

Features

High-quality two-component gasket: core made of corrugated stainless steel profile ring with flexible Statotherm graphite foil on both sides.

The gasket construction for an outside diameter up to 1,000 mm is made in one piece, larger dimensions have a welded profile ring.

Advantages

Two-component corrugated gasket providing:

- Very low fugitive emissions performance
- High gas tightness
- Good pressure resistance, compressibility and excellent resilience even at a permanent operating temperature of 400 °C
- Good chemical resistance
- High blow-out safety with inner eyelet
- No sticking to flange
- Does not age or become brittle
- Easy handling, not harmful to health

Operating range

Pressure: $p = 50$ bar

Temperature:

$t = -200$ °C ... $+450$ °C (graphite 98 %)

$t = -200$ °C ... $+500$ °C (graphite 99.85 %)

$t = -200$ °C ... $+250$ °C (PTFE)

Chemical resistance: pH = 0 ... 14

Forms of supply

Preferred standards acc. to DIN EN 1514 as well as ASME standards

Materials

Corrugated metal according AISI/ASTM 321 (1.4550) or 316Ti (1.4571)

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Shipbuilding
- Heat exchangers
- Covers
- Hatches
- Reactor vessels
- Process vessels
- Flange connections
- Pipe connections

Standards and approvals

TA-Luft (VDI 2440) approval
Yarmouth Research: fire safe according to API standard 607/BS6755
Approval according to ASME PVRC

Notes

The marked outer rim carries information of the size, material and pressure class of the gasket and gives an additional mechanical support when load is applied.

Variants

2897/G with inner eyelet

2897/T PTFE-jacketed

2897/TG with inner eyelet

Examples of heat exchanger gasket locations

- A Channel box cover
- B Tube sheet/channel cover
- C Shell/tube sheet
- D Flanges
- E Shell cover
- F Floating head

Corratherm 2897

Corrachem 2897/T

Kammprofile gaskets

Kammprofile serrated gasket 9598

Features

The Kammprofile serrated gasket has a concentrically machined serrated profile from a 4 mm thick base plate and a layer of pure graphite (purity 99.85 %) on both sides, each with 0.5 mm thickness (thicker layers on request). The gasket is easy to handle and particularly appropriate for flanges and flange-like connections in chemical and petrochemical industry, in power plants and nuclear power plants, etc.

Advantages

- The Kammprofile serrated gasket is designed for very sophisticated applications in load bearing connections with high demands on operating safety and tightness
- The gasket provides chemical resistance and an outstanding performance in cases of severe temperature cycling
- It is suitable for both high temperature and cryogenic applications

Operating range

Pressure: $p = 400$ bar,

>400 bar on request

Temperature: $t = -200$ °C ... +550 °C

Chemical resistance: pH = 0 ... 14

Forms of supply

The gaskets as supplied measures $4+1 = 5$ mm thick. With optimum compression in installed condition the graphite layer above each crest measures approximately 0.15 mm, ensuring optimum sealing performance while preventing damage to the flange faces. The facing is normally applied using a low chloride adhesive.

Materials

Serrated ring: Standard 1.4541, 1.4571;

Seal facing: Statotherm pure graphite

(Art. No. 9591/P)

Recommended applications

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Covers
- Hatches
- Process vessels
- Flange connections
- Heat exchangers
- Pipe connections
- Ovens
- Maintenance seals

Standards and approvals

- TA-Luft
- DIN EN 1514-6
- Factory standards

Notes

Recommended surface roughness $R_z > 25$ μm . For greater roughness up to max. 50 μm the thickness of pure graphite layer should be increased. After first warm-up, retightening of bolts is recommended (only without system pressure). This will insure optimum surface pressure.

Recycling:

The surface layer material can only be used once. The serrated gasket can be reused several times if not damaged.

Variants

9598/P (with graphite filler, without centering ring – Form NR)

9598/PZ (with graphite filler, with centering ring – Form IR or LR)

9598/PB (with graphite filler, convex form)

Sealing parameters (N/mm²)

Kammprofile serrated gasket 9598 – installation details (referring to tables on page 43)

Item as delivered

Item after installation

Jacketed gaskets

Materials of construction

Inner gasket materials:

- Non-asbestos fiber sheet
- NBR/aramid fiber sheet
- Graphite

Metal jacket materials:

- Soft Aluminium
- Soft Copper
- Brass
- Carbon steel
- 304 or 304L stainless steel
- 316 or 316L stainless steel
- 321 stainless steel
- Hastelloy® B2 or C-276
- Inconel® 600
- Monel® 400

Other metals and alloys available on request.

Technical data

Pressure and temperature parameters in accordance with customer specifications. Corrosion resistance is dependent upon the choice of materials. Please ask for advice if you are uncertain of the correct selection.

Buralloy jacketed gasket 2500

Features

Buralloy metal-jacketed gaskets are produced in a wide variety of different materials (in various combinations), in many cross-sections and in many styles. They are suitable for flanges in heat exchangers, pipe flanges, boilers and process equipment.

Design

Metal-jacketed gaskets, as the name suggests, consist of:

- Metallic outer shell with either a metallic or non-metallic asbestos-free filler
- The filler material gives the gasket resilience
- The metal jacket protects the filler and resists pressures, temperatures and corrosion

Variants

Profile	Variant number	Application
	2500/BHX200 Flat metal	Suitable for valve bonnets, heat exchangers, tongue and groove joints. Requires relatively high bolt loads.
	2521/BHX210 Flat metal – graphite-covered	Suitable for valve bonnets, heat exchangers. Graphite facing provides excellent adaptability.
	2522/BHX220 French style – single-jacketed	Used in air tools, engines and where space is limited. Narrow width of gasket face < 5 mm.
	2523/BHX230 French style – double-jacketed	Simple gasket as BHX220. For wider gasket face width s > 5 mm.
	2524/BHX240 Single-jacketed – open style	Simple gasket as BHX220. For wider gasket face width s > 5 mm.
	2525/BHX250 Single-jacketed – totally enclosed	Used when filler material must be totally protected.
	2526/BHX260 Double-jacketed – totally enclosed	Most commonly used form of jacketed gasket. Can be made to almost any size and for most applications. Can be applied in standard flanges when the required compression is higher than is allowable for cut fiber gaskets.
	2527/BHX270 Double-jacketed – double shell, totally enclosed	Similar to BHX260 but for higher compressive forces. Extremely robust.

Buralloy heat exchanger seal

Features

Buralloy heat exchanger gaskets are manufactured using graphite, non-asbestos sheet and non-ceramic fiber as the filler, which are then jacketed by various metals such as stainless steel, tin or copper.

Advantages

Especially suitable for static sealing under high temperature and high pressure in heat exchangers or pressure vessels.

Operating range

Pressure and temperature in accordance with customer specifications. Corrosion resistance is dependent upon the choice of materials.

Forms of supply

Size to suit individual requirements, generally in accordance with ASME or DIN standards. Heat exchangers, API standard flanges, cylinder heads and boilers and pressure vessels. Please specify your required standard or specific drawing especially if the gasket is used on an heat exchanger with reinforcing ribs.

Recommended applications

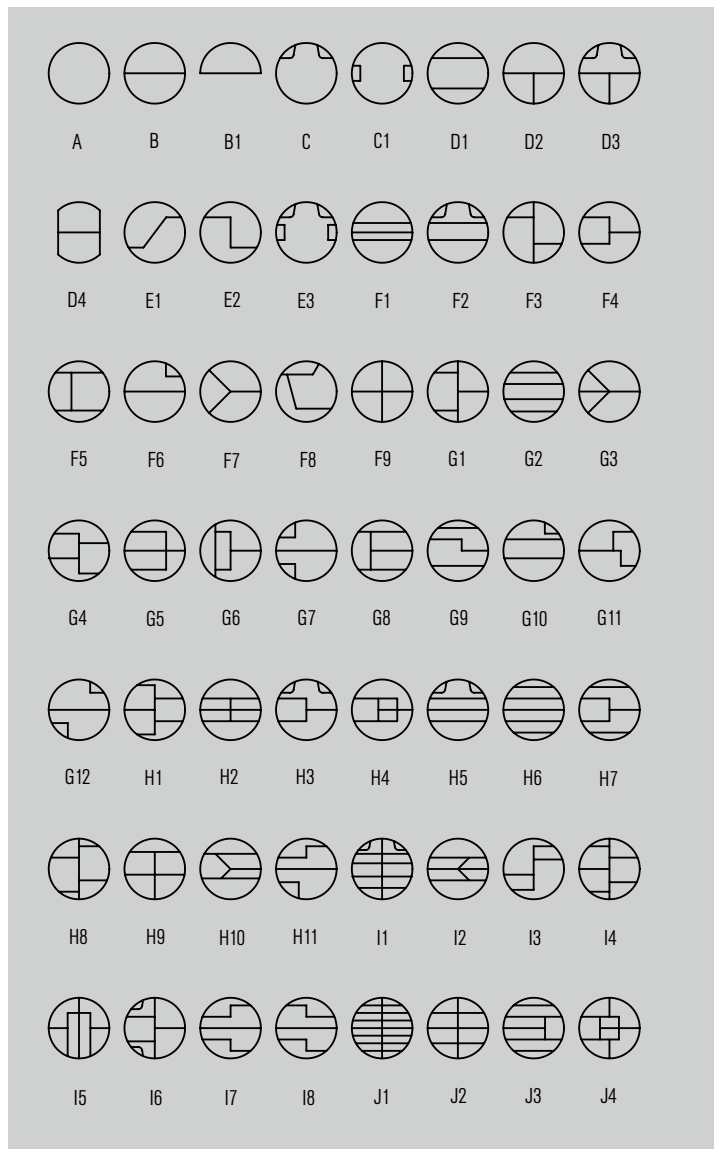

- Process industry
- Oil and gas industry
- Petrochemical industry
- Chemical industry
- Power plant technology
- Building services industry
- Heat exchangers
- Reactor vessels
- Process vessels

Examples of Heat Exchanger gasket locations

- A Channel box cover
- B Tube sheet/channel cover
- C Shell/tube sheet
- D Flanges
- E Shell cover
- F Floating head

Heat exchanger gaskets profiles

Heat exchanger gaskets are available in the following gasket forms:

- Cut gaskets from fiber or graphite sheet material
- Spiraltherm Spiral wound gaskets
- Corratherm gaskets
- Kammprofile gaskets
- Buralloy jacketed gaskets

Ring type joints

Buralloy ring type joint 2961

Features

Ring type joints are manufactured according to ASME B16.20 (2007) standards and to API specification 6A and 17B. Careful control of all manufacturing processes ensures correct surface hardness to give a good seal without damaging flange connections.

Advantages

- Secure sealing action through metal-to-metal contact for reliable sealing in high-pressure applications
- They are used in the oil field on drilling and completion equipment and in downstream refinery applications. Ring type joints are also commonly used on extremely high-pressure valves and pipework assemblies, along with some high integrity pressure vessel joints

Operating range

ASME B16.47 series A/B (ANSI B16.5): class 150 ASME B16.20 (API 6A): class 2,000

Materials

RTJs are available in soft iron, 304 and 316 stainless steels as standard. Other materials are available on request.

Forms of supply

RTJs are available to suit all ASME and DIN flanges from stock – 1/2" to 36" and 15 mm to 900 mm. Larger size and special requirements are available to order.

Recommended applications

- Oil and gas industry
- Petrochemical industry
- Power plant technology
- Corrosion resistance is dependent upon the choice of ring material
- Flange connections
- Pipe connections

Standards and approvals

All ring type joints are manufactured according to API standards, thereby providing certified reliability.

Functional description

Under axial compressive load, ring type joints plastically deform and flow into the irregularities of the flange groove. Since the load bearing area of the ring type joint is relatively small, very high surface stresses result between the sealing faces of the ring type joint and the groove. These stresses are further increased on the style RX and BX rings which allow very high internal pressures to be sealed. Since ring type joints are solid metal, their recovery characteristics are poor. The seal is maintained by the action of axial load upon the gasket.

Buralloy ring type joints according to the "R" standard

Tolerances (inches)

A (width of ring)	±0.008
B, H (height of ring)	±0.020
P (average pitch diameter of ring)	±0.007
23° (angle)	±0.5°

Buralloy ring type joint 2961/R

Style R ring type joints are manufactured in oval (2961/R) and octagonal profiles (2961/ROK). Both styles are interchangeable in the modern flat-bottomed groove. Octagonal profile joints are interchangeable on flat-bottomed

groove flanges which have a 23° angle groove wall. Style R ring type joints are designed to seal pressures up to 6,250 PSI (425 bar) in accordance with ASME B 16.5 ratings and up to 5,000 PSI (340 bar) in accordance with API 6A pressure ratings.

Buralloy ring type joints according to the "RX" standard

Tolerances (inches)

A (width of ring)	+0.008 ... 0.000
B, H (height of ring)	+0.008 ... 0.000
OD (outside diameter of ring)	+0.020 ... 0.000
23° (angle)	±0.5°

Buralloy ring type joint 2961/RX

Designed for pressures up to approx. 10,000 PSI (700 bar). This is self-sealing that uses a pressure-energized effect. The Style RX ring type joint is manufactured in accordance with API 6A and ASME B 16.20, to suit API 6B and ASME B 16.5 flanges. The Style RX is designed to fit the modern flat-bottom groove, and is interchangeable with the standard Style R ring type joint. However, since the Style RX is significantly taller than a Style R, larger flange make-up distances will result.

Style RX ring type joints are designed to seal pressures up to 6,250 PSI (425 bar) in accordance with ASME B16.5 pressure ratings, and up to 5,000 PSI (340 bar) in accordance with API 6A pressure ratings. Selected sizes incorporate a pressure passage hole to allow for pressure equalization each side of the sealing faces.

Buralloy ring type joints according to the "BX" standard

Tolerances (inches)

A (width of ring)	+0.008 ... 0.000
D (hole size)	±0.02
H (height of ring)	+0.008 ... 0.000
OD (outside diameter of ring)	+0.000 ... 0.006
23° (angle)	±0.25°

Buralloy ring type joint 2961/BX

The Style BX ring type joint is manufactured in accordance with API 6A. All BX ring type joints incorporate a pressure passage hole to allow for pressure equalization each side of the sealing faces. On assembly, metal-to-metal contact of the flange faces is achieved. The Style BX is not interchangeable with any other style and is only suited for

API 6BX flanges. Style BX ring type joints are designed to seal pressures up to 20,000 PSI (1,360 bar) in accordance with API 6A pressure ratings. Styles SRX and SBX are derived from Styles RX and BX and are produced in line with the API Standard 17 D for use on subsea wellhead and Christmas tree equipment.

Rubber-steel gaskets

KH rubber-steel gasket 9107/KH

Features

Rubber-steel gasket for load bearing connections. Metal support ring completely jacketed with rubber gives added strength while ensuring perfect sealing at lower bolt loads for large bore flanges.

Advantages

- The metal core increases the stability of the gasket and results in better blow-out safety
- Due to the spherical elastomer body the precompression can be reduced and still give better sealability
- This gasket can also be used for fragile components like plastic flanges

Operating range

Pressure: $p = 25 \text{ bar}$

Temperature:

$t = -30 \text{ °C} \dots +120 \text{ °C}$ (EPDM)

$t = -25 \text{ °C} \dots +70 \text{ °C}$ (NBR)

$t = -20 \text{ °C} \dots +200 \text{ °C}$ (FPM)

Forms of supply

Complete seal with support ring made of stainless steel 37.
Sizes acc. to EN 1514-1 or EN 12560-1.

Recommended applications

- Power plant industry
- Water and waste water industry
- Building services industry
- Flange connections
- Pipe connections

Notes

Other ring materials and elastomeric materials available.

KN rubber-steel gasket 9107/KN

Features

Replaceable EPDM sealing lip, mounted on metal supporting ring which performs both a centering and a load-restricting function. It absorbs the tightening forces necessary for high pressures while protecting the rubber seal from excessive compression. With coated flanges we recommend selecting an outside diameter of coating that permits the sealing lip on the atmosphere side to lie within the area of the steel. If necessary, please discuss exact sizes with EagleBurgmann.

Advantages

- The supporting ring does not come into contact with the medium. Uniform distribution of stresses is guaranteed by special sealing lip geometry combined with elastomer of the highest quality
- The permissible contact pressures and transverse loads, which are a vital factor in soft rubberized flanges, are not exceeded
- For flange connections with flat faces in all areas of industry, e.g. general piping, process equipment and pipe flanges made of plastics and glass, also rubber-coated steel flanges, waste exhaust treatment plants with rubber-coated flanges and tubes

Operating range

Pressure: $p = 64 \text{ bar}$

Temperature: $t =$ temperature resistance EPDM

Sustained operation: $-30 \text{ °C} \dots +130 \text{ °C}$,
a few hours: $-30 \text{ °C} \dots +150 \text{ °C}$,
a few minutes: $-30 \text{ °C} \dots +200 \text{ °C}$

Forms of supply

Complete seal with supporting ring made of St 37.
Other ring materials and elastomeric materials available.

Recommended applications

- Power plant technology
- Water and waste water technology
- Building services industry
- Flange connections
- Pipe connections

Materials

Sealing ring EPDM metal supporting ring (stainless steel 37 galvanized and chromated)

Notes

Note to fabrication:

up to DN 800 or 32" the sealing lips are manufactured by injection molding. The higher dimensional accuracy achieved by injection molding makes it superior to the frequently applied method of production by displacement with an open compression mold. For diameters $> \text{DN } 800$ the sealing lips are extruded and their joints vulcanized to form the sizes needed for installation. Recommended surface roughness $R_z \leq 100 \text{ }\mu\text{m}$. Generally: the smoother the surface, the higher the achievable tightness.

Sealing characteristics (N/mm²)

$$q_{vu} = 2 \quad q_{v0} = 10 \quad m = 1.3$$

Load values (q)

Elastomer gasket: The surface load with the flange in locked position is

$q_{\text{max}} =$ approx. 10 N/mm^2 at room temp.

$q_{\text{max}} =$ approx. 6 N/mm^2 at 100 °C

Sealing face requirements

Recommended surface roughness $R_z = \leq 100 \text{ }\mu\text{m}$. As a basic rule: The finer the surface, the tighter the seal.

Distribution of contact forces with an EagleBurgmann 9107/KN gasket in a non-load bearing, rubberized flange connection.

Forms of supply

Up to DN 600 or 24" the gasket is manufactured as a single unit.
For diameters >DN 600 the gasket is manufactured in easily transported segments and assembled on site.

Recommended applications

- Power plant industry
- Water and waste water industry
- Building services industry
- Flange connections
- Pipe connections

Functional description

The EPDM sealing lip is mounted in the PVC supporting ring which performs both a centering and a load-restricting function. It absorbs the tightening forces necessary for high pressures while protecting the rubber seal from excessive compression. The PVC supporting ring does not come into contact with the medium.

Notes

Note for fabrication:
up to DN 800 or 32" the sealing lips are manufactured by injection molding. The higher dimensional accuracy achieved by injection molding makes it superior to the frequently applied method of production by displacement with an open compression mold. For diameters >DN 800 the sealing lips are extruded and their joints vulcanized to form the sizes needed for installation. Recommended surface roughness $R_z \leq 100 \mu\text{m}$.
Generally: the smoother the surface, the higher the achievable tightness.

KN rubber-PVC gasket 9117/KN

Features

The KN Rubber-PVC gasket consists of a PVC supporting ring and a specially shaped, renewable, inner elastomer seal for installation in non-load-bearing positions in large bore pipework.

Advantages

The advantages of a PVC support ring:

- Reduced weight for large gaskets
- Easier handling and transportation
- Gasket can be made to suit almost any diameter of pipe
- Lower overall installed cost when compared to conventional steel gasket

Operating range

$p = 25 \text{ bar}$
 $t = -30 \text{ }^\circ\text{C} \dots +130 \text{ }^\circ\text{C}$ (sustained)

Materials

Inner seal – EPDM elastomer
Outer ring – PVC

Tools, maintenance products

Gasket cutter 9614

Features

The gasket cutter consists of a base plate to cut on, a short and a long bar with a sliding cutting tool. The sealing material is fixed by the central bolt. The tools to punch the central hole are easy to use. After fixing the sealing material on the base plate and adjusting the cutting diameter on the bar, the gasket is cut by rotating the cutting tool.

Advantages

Especially suitable to produce small quantities of gaskets from sheet materials. An easy-to-handle special tool. Also suitable for rubber, plastics and other materials; from inner diameter 30 mm up to outer diameter 1,000 mm.

Joudol >SM 8152<

Features

Graphite-based lubricant and release agent.

Advantages

Universal high-duty lubricant and anti-seize agent with a graphite base. Prevents seals from sticking and baking to surfaces. Keeps screw threads movable.

Operating range

Temperature: t = resistant from -200 °C up to +500 °C

Forms of supply

Can: 1 kg
Tube: 230 g

Gasket nibbler 9615

Features

The complete equipment consists of an aluminium base plate, a nibbler with holding device, a parallel stop, a release key to change the cutting knives, a spare knife, two clamps, a punching tool, a plate to punch on as well as a pair of scissors to cut sealing material (prepare smaller pieces from sheet material by hand).

Advantages

Tool for gasket cutting from sheet materials with or without metal reinforcement in smaller quantities. With this nibbler any gasket form can be cut, not only rings. Ideally for quick repair service and on-site cutting.

Operating range

Voltage: 230 V
Strokes: 100 mm min.
Min. seal diameter: approx. 60 mm
Max. seal diameter: approx. 1,500 mm
Seal thickness: 3 mm max.
Max. thickness of metal inlay: 0.2 mm

Forms of supply

Set/spare parts

Gasket parameters to EN 13555 (sample thickness = 2 mm)

Q_{S(MIN(L))}
Maximum surface pressure that may be imposed on the gasket at the indicated temperatures without collapse or compressive failure of the gasket.

Q_{MIN(L)}
Minimum gasket surface pressure on assembly required at ambient temperature in order to seat the gasket into the flange facing roughness and close the internal leakage channels so that the tightness class achieved is to the required level **L** for the internal test pressure.

L_N
Tightness classes are defined in terms of specific leakage rates.

Tightness class: L_{1,0} L_{0,1} L_{0,01}
Specific leakage rate: ≤1.0 ≤0.1 ≤0.01
(mg s⁻¹ m⁻¹)

Q_{S(MIN(L))}
Minimum gasket surface pressure required under the service pressure conditions to maintain the required tightness class for the internal application pressure.

P_{OR}
Factor to simulate the effect of gasket relaxation after bolt tightening with long-term exposure to service temperatures.

Gasket parameters to EN 13555 (sample thickness = 2 mm)

Spiral wound gaskets dimensions (acc. to EN 1514-2 (2005) and ASME B16.20 (2007))

We recommend type GIA with inner and outer ring starting from the following nominal widths and nominal pressures: from PN 10 to DN 250, from PN 64 for DN 300 to DN 700, and from PN 16 for DN 800 and above.

Gasket dimensions for flanges according to DIN 2513 with projection and recess (VR and VRI profile) for PN 25 to PN 100 and for flanges to DIN 2512 with tongue and groove (NF profile) for PN 25 to PN 160.

Profile VR for flanges with projection and recess. Item No. 9594-VR.

Profile VRI for flanges with projection and recess with inner ring. Item No. 9594-VRI.

Profile NF for flanges with tongue and groove. Item No. 9594-NF.

TotalSealCare service

TotalSealCare – The modular seal service from EagleBurgmann

Are you planning an overhaul of your plant? Perhaps you have a deadline for an upgrade or conversion of all valves to meet fugitive emission regulations, for example. You need more engineers and qualified technical staff? This is where EagleBurgmann can help you – with our mobile on-site sealing service. You describe the scope of work and EagleBurgmann will organize a complete seal workshop to be delivered to site with all the required tools, men and materials. All managed by an experienced EagleBurgmann site engineer. To make sure that everything goes according to your timetable.

The benefits to you are

- Our knowledge and experience in all matters to do with seals
- Planning and keeping to budget
- No extra storage required
- Quickest seal supply
- No additional staff of your own required
- Sealing solutions installed are the latest technology and in compliance with the relevant statutory provisions
- Site independent due to own mobile service workshop

Gasket cutting service

EagleBurgmann has strategically located gasket cutting centers around the world offering 24 hour turnaround times for custom-made gaskets. The state-of-the-art CNC machines offer flexibility and low cost in either producing a single gasket or small to medium size batch quantities.

The benefits to you are

- No tooling costs
- Almost any gasket material can be cut into the most intricate shape
- Reduce your spares stock since delivery can be made in hours (by prior arrangement)
- Reduce downtime caused by non-availability of critical gasket components

GasketXpress production for maintenance demands

In key centers around the world, the EagleBurgmann GasketXpress gasket units manufacture gaskets on a made-to-order basis in a matter of hours.

Cut gaskets

Using state-of-the-art cutting technology, EagleBurgmann can ensure that even the most complex shape is produced accurately, time after time. Gaskets can be produced from simple drawings or downloaded CAD (DXF) files. All standard gasket sheet materials are available.

Metallic gaskets

Spiral wound gaskets, Kammprofiles and RTJs are available for emergency and breakdown requirements within hours from the EagleBurgmann Gasket Xpress gasket production units.

The latest production techniques and equipment allow flexible and fast manufacturing of metallic and semi-metallic gaskets in standard metals and filler materials. A range of exotic alloys is also stocked for severe and critical applications.

Compression packings

A cost-effective and reliable method for sealing pump shafts, valve spindles and rotating shafts in process equipment. Manufactured from a range of material combinations – traditional and innovative – using state-of-the-art production techniques. Supplied in boxed lengths or pre-cut rings. Approvals/certification includes BAM, DVGW, FDA, API, ISO, TA-Luft. Fire safe, low leakage and nuclear grades are available with full documentation and certification.

Rotatherm graphite rings

An accepted industry standard for valves and pumps in high-pressure and high-temperature service. Manufactured as molded rings (with and without steel reinforcement) or special seals. Suits all industry applications including the power and nuclear industries. Approvals/certification includes: BAM, DVGW, API, ISO, TA-Luft.

BuraTAL fugitive emission products

A comprehensive range of low leakage packing sets manufactured in graphite or our unique non-woven materials. All current fugitive emission standards are met with outstanding performance, low friction, ease of installation and a long service life. Approvals/certification includes: API 622, ISO 15848, TA-Luft.

Burajet injectable packings

The Burajet injectable packing system offers a wide range of injectable compounds for pumps, valves and process equipment. An ideal product for the mining and paper & pulp industries. Approvals/Certification includes: FDA.

Buraglas glass packings

Manufactured from non-ceramic materials and fibers, BuraGlas packings are suitable for sealing of vessels, coal mills, industrial furnaces, oven doors, hatches and covers. Produced in lengths in sizes up to 150 mm section. Approvals/Certification: Hydrolytische Klasse 1, DIN 12111.

Packing cartridges

Packing cartridges combine quick and easy installation with robust simple construction to provide minimum downtime and maximum reliability. Manufactured to individual requirements to fit into DIN/ASME standard equipment, e.g. agitators. Cartridges can be supplied with live-loading and additional bellows containment for maximum environmental safety.

Additional EagleBurgmann product lines

Mechanical seals for pumps

EagleBurgmann offers a complete range of liquid and gas-lubricated pump shaft seals including standard and engineered seals in single and multi-seal versions. We also offer a complete range of solutions for all API 682 categories and arrangements. The portfolio includes a broad selection of material and surface technologies such as DiamondFaces coatings.

Carbon floating ring seals

Carbon floating ring seals are supplied as maintenance-free compact labyrinth cartridge seals with low leakage. The floating self-adjusting sealing rings provide radial sealing on the shaft with a very small gap. The seal requires no additional lubrication, and it is designed for dry running. Besides pure gas, carbon floating ring seals are also suitable for Atex applications, toxic media, media containing solids, flue gas, dust, powder, vapor, liquid mist, oil mist and penetrating oil.

Mechanical seals for agitators

Sealing solutions for normal and sterile applications. The design and selection of materials ensure that the seals are rugged enough to deliver outstanding cost and engineering performance in everyday applications.

Expansion joints

Flexible expansion joints in pipes and duct systems neutralize the effects of pressure and temperature fluctuation, vibration and misalignment at the joint. They must also be leakproof and resistant to media. Customized expansion joints made of fabric, metal or rubber are the solution of choice.

Mechanical seals for compressors

A complete range of products for process gas compressors from a single source. Single, double and tandem versions and tandem seals with intermedia labyrinths. Rugged, non-wearing, non-contact seals designed to deliver outstanding performance and long service life.

Special products

For particular applications, innovative, customized solutions are the only answer. The supplier must have a wealth of in-depth expertise, many years of experience and above all the willingness and ability to translate ideas into solutions that work in practical application.

Magnetic couplings

Uncompromising sealing technology for very demanding applications. Hermetically sealed magnetic couplings guarantee leakage-free and maintenance-free pumping and mixing. The media remains within closed system circulation loops.

Seal supply systems

Depending on the design, application and mode of operation, supply systems are needed to flush, cool and pressurize mechanical seals and magnetic couplings and provide leakage compensation. EagleBurgmann supplies a complete range of solutions from a single source including design, production, commissioning and service. The portfolio includes a complete line of API compliant supply systems.

SSE / E3 / 3.000 / 05.15 / 7.41 © EagleBurgmann Group Marketing, Germany

EagleBurgmann is one of the internationally leading companies for industrial sealing technology. Our products are used everywhere where safety and reliability are important: in the oil and gas industry, refining technology, the petrochemical, chemical and pharmaceutical industries, food processing, power, water, mining, pulp & paper, aerospace and many other spheres. Every day, more than 6,000 employees contribute their ideas, solutions and commitment towards ensuring that customers all over the world can rely on our seals. Our modular TotalSealCare service underlines our strong customer orientation and offers tailor-made services for every application.
